

Pool Heating Systems

Recowatt offers various technologies for heating pools that are inexpensive to operate, energy efficient and environmentally friendly.

Solar Thermal Collectors

Guarantee a heated pool all year round. Combined dual system that heats up the pool, as well as distributing domestic hot water. Each system is professionally designed according to one's water supply demands. Easy to be integrated with any present system used as a backup system.

✓
PERFECT FOR: All pools where roof space is available to install such collectors

Benefits

- Potable hot water
- More than 80% savings
- Hot water all year round
- Return on investment in under 5 years

Heat Pumps

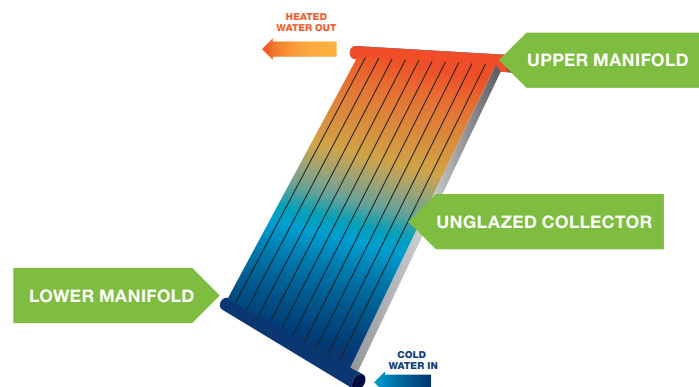

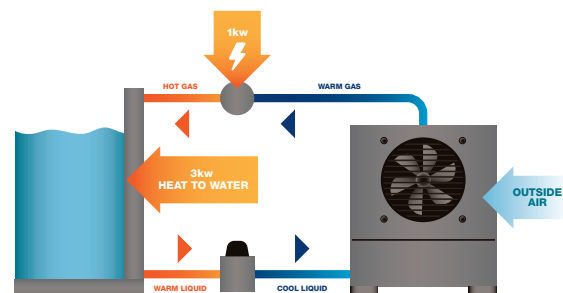

We offer two types of heating pumps:

- Thermodynamic heat pumps
- Air sourced heat pumps

Benefits

- Can easily switch on and off. Ideal for seasonal use
- Lifespan of 10 to 20 years

AIR SOURCED HEAT PUMP

Solar Absorbers

Solar absorbers use solar radiation to transfer heat from the sun to your swimming pool. Absorbers collect heat when they are exposed to the sun, then the swimming pool pump pushes water through the circulation system and through the solar absorbers. The water heats up as it passes through the solar absorbers.

Benefits

- Lifespan of 15 to 20 years
- Different lengths to suit the installation area
- Portable hot water
